

# Juniper Networks **ISG Series**

**ISG 1000****ISG 2000**

The Juniper Networks Integrated Security Gateways (ISG) are purpose-built security solutions that leverage a fourth generation security ASIC, the GigaScreen<sup>2</sup>, along with high speed microprocessors to deliver unmatched firewall and VPN performance. The Juniper Networks ISG 1000 and ISG 2000 are ideally suited for securing enterprise, carrier and data center environments where advanced applications such as VoIP and streaming media dictate consistent, scalable performance. Integrating best-in-class Deep Inspection firewall, VPN and DoS solutions, the ISG 1000 and ISG 2000 enable secure, reliable connectivity along with network and application-level protection for critical, high-traffic network segments.

The ISG Series can be upgraded to support integrated Intrusion Detection and Prevention (IDP) to provide robust network and application layer protection against current and emerging threats. Leveraging the same software as found on Juniper Networks' IDP platforms, but integrated into ScreenOS, the ISG Series provides a combination of best in class firewall, VPN, and IDP in a single solution. Plus, with dedicated processing modules called security modules, dedicated processing is provided to ensure multi-gigabit firewall, VPN, and IDP. With unmatched security processing power and network segmentation features, the ISG Series can be deployed to protect perimeter deployments as well as internal networks.

**ISG 1000:**

The ISG 1000 is a fully integrated FW/VPN/IDP system with gigabit performance, a modular architecture and rich virtualization capabilities. The base FW/VPN system comes with four fixed 10/100/1000 interfaces and two additional I/O modules for interface expansion. The ISG 1000 also supports two security modules for IDP integration.

**ISG 2000:**

The ISG 2000 is a fully integrated FW/VPN/IDP system with multi-gigabit performance, a modular architecture and rich virtualization capabilities. The base FW/VPN system allows for up to four I/O modules and three security modules for IDP integration.

The Juniper Networks Integrated Security Gateway features include:

**Security:**

Use the Stateful and Deep Inspection firewall, DoS protection and optional integrated IDP to prevent network and application level attacks and defend against the propagation of worms, Trojans, malware, spyware, hackers and a broad set of other attacks. Please refer to the ISG Series with IDP datasheet for more information on this option.

**Network friendly:**

Support for key routing protocols, such as OSPF, RIPv2, and BGP, along with transparent Layer 2 operation, NAT and Route mode help facilitate network integration. To satisfy complex internal network segmentation

demands dictated by various government regulations such as Sarbanes-Oxley and GLBA, the ISG Series delivers the most advanced set of network segmentation features including Virtual Systems, Security Zones, Virtual Routers and VLANs.

**Resiliency:**

Hardware component redundancy, multiple high availability options and route-based VPNs provide the reliability required for high speed network security deployments.

**Interface flexibility:**

Almost every network deployment can be met with a wide variety of copper and fiber interface options.

(1) Performance, capacity and features listed are based upon measured maximums under ideal testing conditions. Performance may vary with other ScreenOS releases and by deployment. Actual throughput may vary based upon packet size and enabled features.

(2) NAT, PAT, policy based NAT, virtual IP mapped IP virtual systems, virtual routers, VLANs, OSPF, BGP RIPv2, Active/Active HA, and IP address assignment are not available in layer 2 transparent mode.

(3) Shared among all Virtual Systems.

(4) Not available with Virtual Systems.

(5) Deep Inspection is automatically disabled when integrated IDP is installed.

(6) Additional license required.

**Licensing Options:** The ISG 1000 and ISG 2000 are available with two licensing options to provide two different levels of functionality and capacity.

- **Advanced Models:** The Advanced software license provides all of the features and capacities listed within this spec sheet.
- **Baseline Models:** The Baseline software license provides an entry-level solution for customer environments where features such as Deep Inspection™, OSPF and BGP dynamic routing, advanced High Availability, and full capacity are not critical requirements. The following table shows the features and capacities that differ between the Baseline and Advanced models:

	Baseline		Advanced	
	ISG 1000	ISG 2000	ISG 1000	ISG 2000
Sessions	125,000	256,000	250,000	512,000
